

Getting started with the environemnt

1 Log in

Log in by typing this in the terminal:

```
ssh xxxx1234@triton.dsv.su.se
```

Replace `xxxx1234` with your username.

You will be asked for a password. Then use your normal SU-password.

You will then reach a Unix prompt.

2 The interactive Python prompt

Start by typing the following in the Unix prompt:

```
ipython3
```

Stop using it by typing:

```
exit()
```

3 Create a directory to store your files

Stand in your home directory on triton, and write the following in the Unix prompt:

```
mkdir lis020
```

You then reach this directory by typing:

```
cd lis020
```

(Other very useful Unix commands include: `ls` and `pwd`. Also: don't forget you can use the up and down keys to reach previous commands.)

Getting started with the environemnt

4 Use the micro editor

Type the following in the Unix prompt:

```
micro hello.py
```

If `hello.py` exists, this file will be opened. Else, an empty file with this name is opened.

(Replace `hello.py` with the name of your python file.)

Save by pressing Ctrl-s

Quit micro by pressing Ctrl-q

5 Run Python scripts from the Unix command line

Type the following in the Unix prompt:

```
python3 hello.py
```

(Replace `hello.py` with the name of your python file.)

6 Import Python scripts to the interactive Python prompt

Start the interactive Python prompt by typing the following in the Unix prompt:

```
ipython3
```

In the interactive Python prompt, type:

```
import hello
```

(Replace `hello` with the name of your python file.)
